

GLS's network is constantly expanding!

Last July, we inaugurated a **new Hub in Verona, with the new Depot annexed.**

A new concept, which GLS decided to test for the first time in this area of Veneto, considering the great importance that the new facility will have for the network. Thanks to their strategic location, midway between the East and the West, the Hub and Verona Depot will in fact make it easy to maintain high service standards in as many as 12 GLS Locations in northeastern Italy.

Verona is one of many Italian areas where GLS is working to open new establishments and strengthen

existing ones. We continue to invest significantly in Italy because this country plays a key role for our company within the dynamics that characterize the broader European context.

This investment, in addition to those made in recent years to open new Hubs, is aimed at increasing the capillarity of our presence in key areas across the nation to support the Italian business community through services characterized by a high standard of quality.
