

Our Sustainability Programme

Sustainability is one of GLS's five core values, a driving force that every one of our employees puts into practice every day.

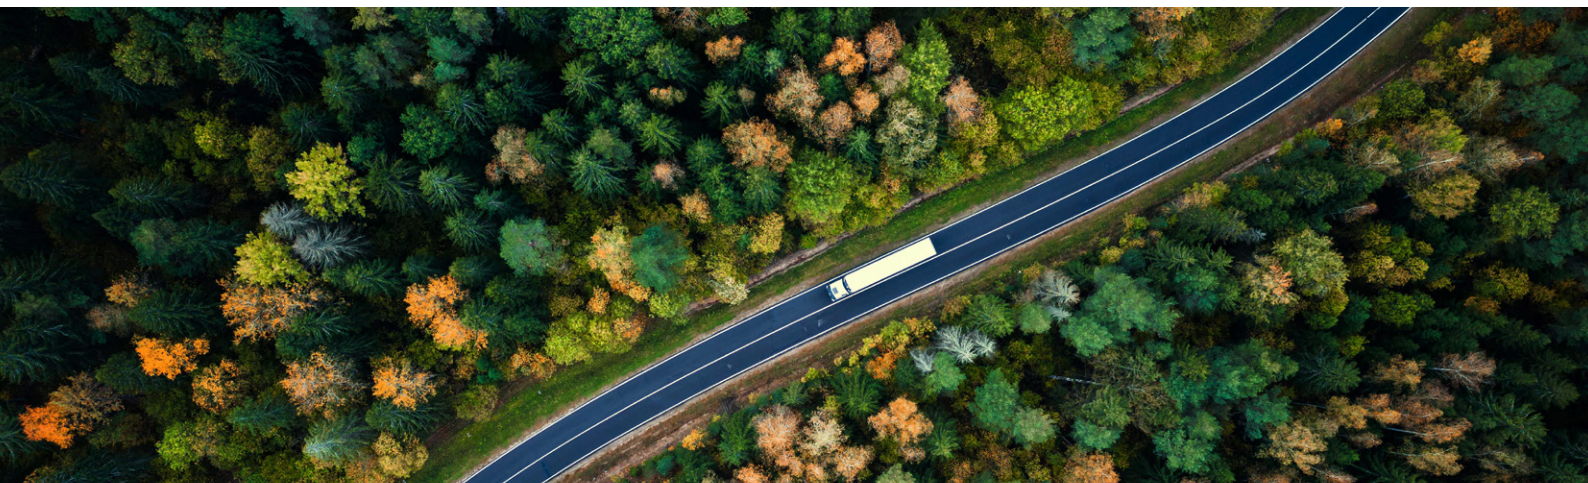

In April 2021, GLS unveiled ClimateProtect, an ambitious project with the long-term goal of zero CO₂ emissions by 2045/50.

A goal that we will achieve through the progressive development of activities with intermediate steps: a first phase involves the offsetting of CO₂ emissions well to-wheel for which we have already achieved the EN 16258:2012 certificate. While in the second and third phase we will aim at an increasing reduction of CO₂ emissions.

In order to achieve our goals, we are concentrating on a wide range of measures in the areas of vehicles, transport planning and the design of buildings.

By 2022, we had the goal of achieving 100 percent CO₂ offsetting. This has already been achieved by obtaining EN 16258:2012 certification. By 2030, our corporate fleet will consist entirely of electric cars for employees. In addition, 50% of our transportation will have zero or less environmental impact, a percentage that will reach 100% by 2035.
